

Stax mallet finger splints

- Quick response to finger injuries
- Effective management of mallet finger
- Durable and comfortable
- Eight sizes available for a perfect fit

Designed to support distal joint of finger in extension while permitting unrestricted movement of proximal interphalangeal joint. Stax-mallet is normally used without padding and is taped to middle phalanx, elevating the distal joint to the properly extended position. For use in clinics, hospital emergency departments, industrial clinics and athletic training rooms for a quick response to finger injuries.
